Detector Lamps for Water LC Systems

Features

Agilent lamps for Waters HPLC systems are designed and built to be compatible with a wide variety of detectors, including Multiple Wavelength Detectors (MWD), and Photodiode Array Detectors (PDA). All the lamps adhere to the tightest specifications for consistent quality and reproducible performance over the entire lifetime of the lamps. Test equipment is regularly calibrated using optical standards certified by NIST (National Institute of Standards and Technology) or PTB (Physikalisch Technische Bundesanstalt).

Feature

- High output stability and intensity for extended detection capabilities and improved qualification at trace level
- Guaranteed lifetime of 2,000 hours
